

1stSight

Transforming bodycam footage into actionable incident intelligence

TEAM ADORE: JOSEPH, TZE KAI, YALE, JIA JIA

Recording everything
doesn't mean
understanding anything.

PROBLEM

Each month, SCDF responds to multiple fire & medical incidents where **critical ground-level moments** are streamed on **bodycam**. But these moments are buried across long footage & separate records, **slowing live situational awareness & post-incident review**.

How might we **turn responder footage into live incident intelligence?**

SOLUTION OVERVIEW

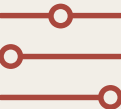

1stSight is an **AI-powered Command & Control dashboard** that converts responder bodycam footage into searchable incident intelligence.

SOLUTION

DURING OPERATIONS

-  Detect key events
-  Build incident timeline
-  Suggest actions to Ops Centre

POST INCIDENT

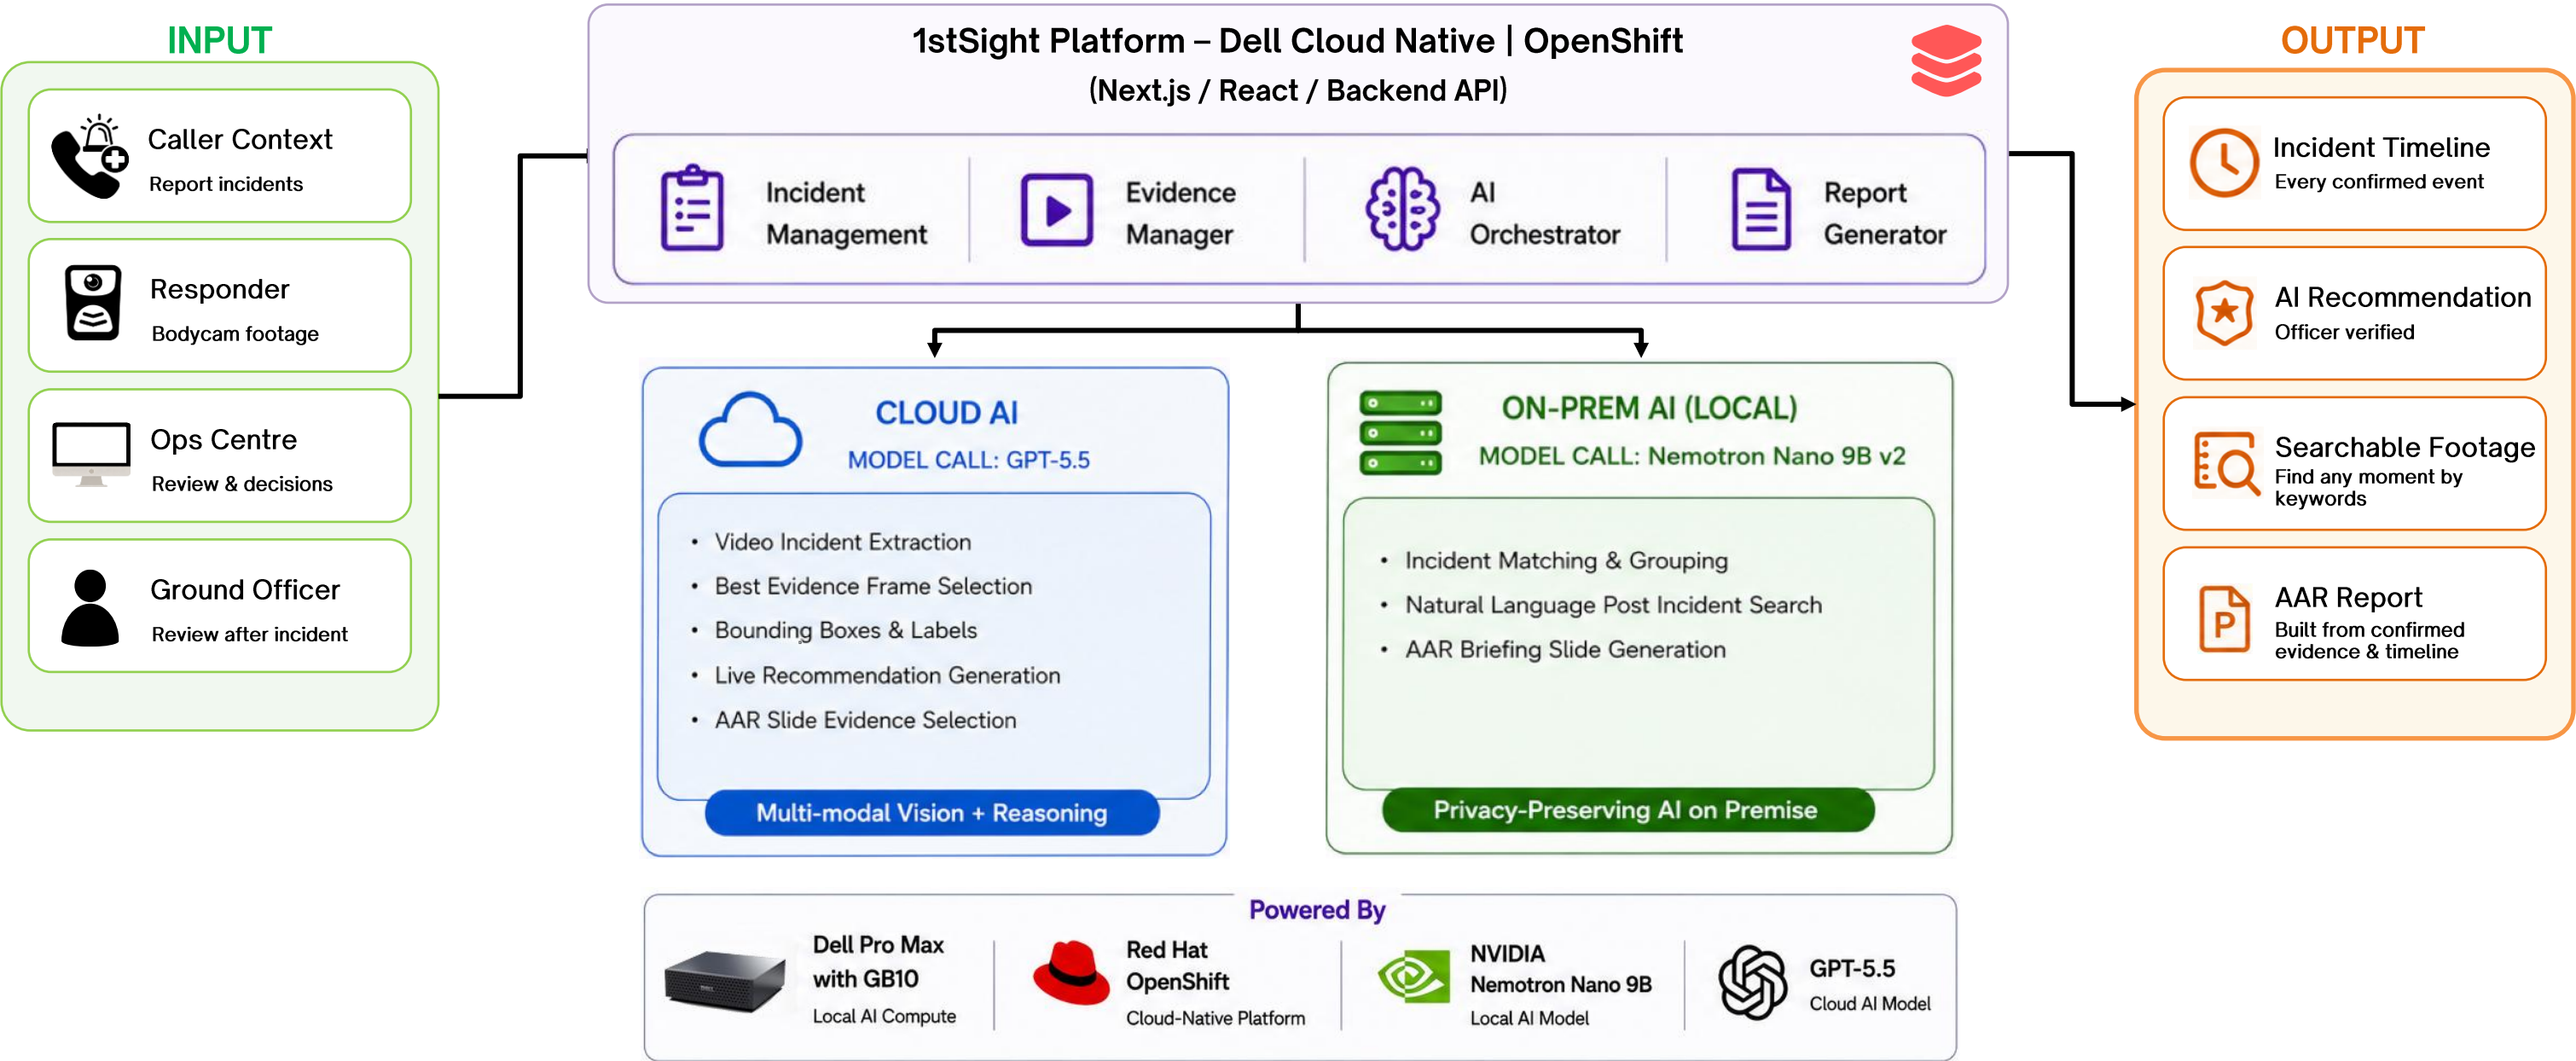

-  Search incidents
-  Retrieve supporting evidence
-  Review critical moments
-  Export structured reports

Operation Scenario Demonstration

DEMO

ARCHITECTURE DIAGRAM

WHY IT MATTERS

- 300,000+ incidents a year with no automated evidence capture
- Every AAR is built from memory and not confirmed evidence
- Critical moments get buried in hours of unstructured footage
